

### FACTSHEET

#### Performance Returns

The North MaxQ Macro UCITS Fund (USD Inst. Class) return for the October 2018 period (26<sup>th</sup> September 2018 to 31<sup>st</sup> October 2018) was **+6.89%** bringing the year-to-date return to **+14.10%**.

#### Fund Overview

The North MaxQ Macro UCITS Fund is a global macro fund that seeks to generate absolute positive returns over a market cycle that is uncorrelated to other global macro managers, the broad fund universe as well as interest rate, foreign exchange and equity indices. The investment manager identifies micro-economic and country specific imbalances to develop views and corresponding trading strategies. These strategies provide a diverse source of alpha and are expressed through thematic, relative value, counter-trend and quantitative exposures. The exposures are constructed to offer the best asymmetric payoff, while minimising expected correlations and providing protection against downside gap-risk. The investment manager prefers to take risk across a number of different strategies. Risk is monitored in real-time at the strategy and portfolio level and individual strategy stop-loss limits are established at the inception of each trade.

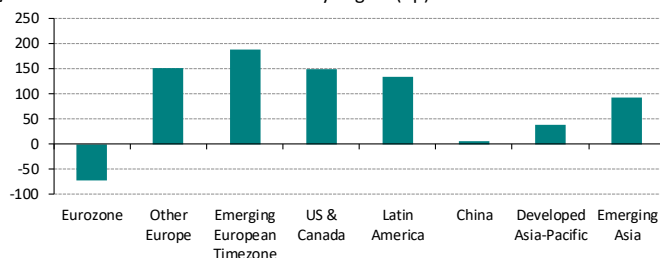

#### Monthly Market Commentary

October saw a substantial correction in global equity markets, with indices down from 7% to 10% which we believe was due to both technical and fundamental factors. Fundamentally markets are concerned about continued monetary policy tightening by the Fed, trade tensions and a slowdown in Asian growth, and technically, overweight positioning and deleveraging from the risk parity community were significant drivers. Fund performance was positive with several contributing strategies. These included our relative value strategy in Turkey, the FTSE 250 and US credit short and FX positions in Brazil and Chile. Consequently, the Fund has reduced its exposure to the above strategies. Eurozone releases were disappointing, confirming a subdued picture for Q3 growth. However, our expectation is that Eurozone growth will stabilise, as policy remains expansionary, supporting domestic demand and in turn wage growth. This should allow the ECB to end QE by this year-end and start preparing the market for rates hikes in the second half of 2019. The Fund is positioned to gain from a faster normalisation of ECB policy than the market expects. In the UK, political developments suggest an orderly Brexit will prevail and Sterling should strengthen over the next few months and the Fund is positioned accordingly, through FX options, with a long FX volatility position, as negotiations will remain tense. In the US, our view is that economic growth peaked in Q2 and will decelerate further. However, we expect wage growth to be robust and inflation to be elevated allowing the Fed to continue to tighten policy, which should result in risky assets remaining vulnerable.

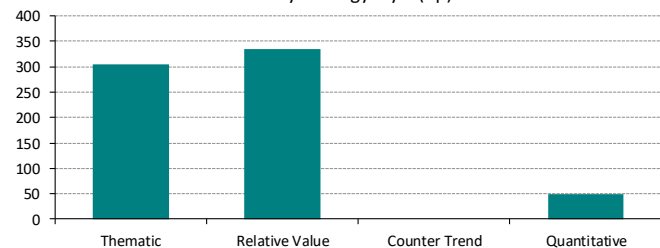

#### Performance Attribution

Out of a total of 43 strategies that were active during the month of October, 20 had a positive return, 8 had a negative return and 15 were essentially flat. 7 strategies were added and 1 was closed. The figures below show the performance attribution across different regions and by strategy style.
