

FACTSHEET

Performance Returns

The North MaxQ Macro UCITS Fund (USD Inst. Class) return for the April 2016 period (30th March to 27th April 2016) was **1.11%** bringing the year-to-date return to **-3.18%**.

Fund Overview

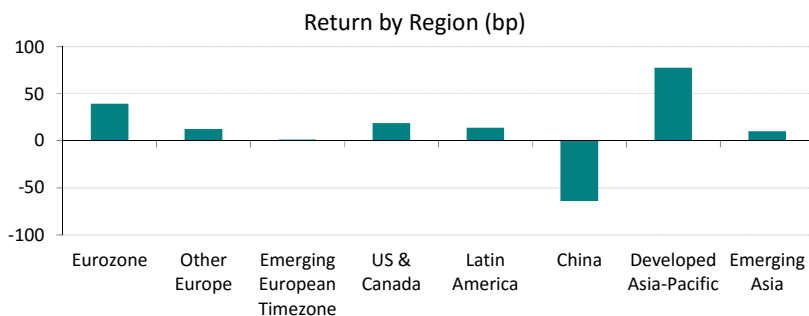

The North MaxQ Macro UCITS Fund is a global macro fund that seeks to generate absolute positive returns over a market cycle that is uncorrelated to other global macro managers, the broad fund universe and primary interest rate, foreign exchange and equity indices. The investment manager identifies micro-economic and country specific imbalances to develop views and corresponding trading strategies. These strategies provide a diverse source of alpha and are expressed through thematic, relative value, counter-trend and quantitative exposures. The exposures are constructed to offer the best asymmetric payoff, while minimising expected correlations and providing protection against downside gap-risk. The investment manager prefers to take risk across a number of different strategies. Risk is monitored in real-time at the strategy and portfolio level and individual strategy stop-loss limits are established at the inception of each trade.

Monthly Market Commentary

After a very volatile Q1, April was a rather uneventful month in regards to market moves. Economic data out of the Eurozone continued to be better than expected and reinforces the view that the recovery is proceeding at a decent pace. The only concern remains inflation, which continues to undershoot. This should allow the ECB to remain accommodative and potentially ease again in the second half of the year, thus underpinning any growth scare. Data out of the US continues to be positive, albeit lacklustre. Looking forward, Q2 data should be meaningfully better compared to Q1, as the labour market remains supportive and the drags on the economy should abate. Chinese data continued to improve, further alleviating pressure on the Renminbi and supporting Emerging Market assets. Fund performance in April was positive though we lost from our Chinese rates position. Looking forward we anticipate increased market volatility, as significant political uncertainty remains, such as "Brexit" and US elections, as well as monetary policy developments in the US.

Performance Attribution

Returns in April were positive but there were some losses from our Chinese rates position. Out of a total of 66 strategies that were active during the month of April, 25 had a positive return, 10 had a negative return and 31 were essentially flat. 5 strategies were added and 3 were closed. The figures below show the performance attribution across different regions and by strategy style.

THE MANAGER

Nick D'Onofrio is a Co-Founder, Managing Partner and Chief Executive Officer at North Asset Management. Nick has over 20 years of experience within the industry.

Nick is a former Executive

Director at Morgan Stanley within the Finance Department and headed the credit risk team that focused on managing the inherent risk in the broad array of products traded at Morgan Stanley, including fixed income, foreign exchange, equities and commodities. Prior to Morgan Stanley, Nick worked at Swiss Banking Corporation and ABN AMRO. He holds a Bachelor's degree from Harvard University.
